SecurityPRO Web Filtering

Complete Web Filtering Protection for Small to Medium Businesses

Traditional UTM systems only protect devices inside their networks. **SecurityPRO** protection travels with the device protecting your staff everywhere they're working. Safeguard your business with faster, more secure technology.

Five ways **SecurityPRO** outperforms other web filtering security

Proxy Based Web Filtering

SecurityPRO filters traffic through a proxy system allowing you to grant access to some parts of a site while blocking other. And where DNS leaves users exposed if a safe site is compromised with malvertising, **SecurityPRO's** proxy scans all portions regardless of reputation.

Total Endpoint Protection

Traditional UTM systems only protect devices inside their networks, leaving employees outside the perimeter exposed. **SecurityPRO** protection travels with the device.

Cloud Based Management

Centrally managed and deployed with a single click, **SecurityPRO** eliminates the need to maintain costly hardware. Updates are sent to all protected devices regardless of their location eliminating the need to VPN back into the security perimeter for protection.

Machine Learning Optimization

Capable of learning from each new deployment and scanned site, **SecurityPRO** self optimizes. Discoveries are then shared to ensure the entire **SecurityPRO** protected community of networks benefit.

Better Security Visibility

Through its intuitive dashboard and detailed reporting, **SecurityPRO** can provide levels of visibility other systems can't. Monitor logs, track activity, see who did what, when and where.
